

Camp Create

Camp Create focuses on helping each camper to develop his or her creative potential. The goal is to empower our MISD students to approach life's challenges with confidence. We do this by honing their creative and critical thinking skills, leadership skills, problem solving abilities, and teamwork.

The campers will begin each day with team building exercises followed by an instant challenge that will focus on engineering, performance or a combination of the two. Each day the campers will be taught a different skill set emphasizing STEAM (Science, Technology, Engineering, Art, and Math). The teams of 10-12 campers will then utilize those skills in daily challenges that they will present to the other teams throughout each day.

Each team will also be collaborating together to solve a long term challenge that will be presented to parents on Friday. This year's week-long challenge will require the teams to create and present an original live radio performance. They will incorporate a technical sound effect, a commercial jingle, and a hook/cliffhanger that encourages the radio listeners to continue listening after the commercial break.
