What is a Chromebook?
A Chromebook is a laptop that runs Google’s Chrome OS.

Chromebooks are designed to be used primarily while connected to the Internet, with most applications and documents living in the cloud.

Chromebooks are designed with multiple layers of security to keep them safe from viruses and malware. Boots up in seconds and works on and offline. Automatic updates with an Internet connection.

Powering Up the Chromebook & Connecting to your home Wi-Fi

- Open the cover
- Wait a few seconds

The Chromebook will power up automatically when you open the cover.

From the list of available networks select your home network.

IF your home network is not listed scroll down and select “Add other WiFi network” and enter the network information in the box that appears.
Individual Google Profiles allows you to bring personal settings and extensions to any Chromebook you sign into—in the classroom, library, computer lab, or at home. Just log in and everything is automatically applied.
